For instance, a research was made during the 00s with the help of X-ray investigations on human teeth with a high precision in order to explore the contrast between periodontal ligament and the adjacent bone. This research allowed the development of a new software for the visualization of the femur and tibia bones at the neck, the head and the shaft of the femur. During the past few years, many advanced DSA solutions were developed to simplify and enhance the co-visualization of images and to improve the registration between images and to provide an easy and intuitive analysis of the quality of the obtained images. The software that we will present in this report is one of the most advanced solutions available in the market. Who is this solution for? The solution is designed for professionals and students to enhance their knowledge about DSA and about the advanced radiography systems that are now widely used in the daily practice in many medical centers. The tutorial will explain the main features of the software and some practical examples from daily practice will be introduced. What is new in this software? In order to simplify the learning process, the software can be divided into three different modules, designed for beginners, experienced users and experts. The first module is the library where all the possible acquisitions and the acquisition modes that are available are displayed. The second module contains the geometry library where all the possible geometric structures are available. With the help of a few clicks a user is able to design a phantom from a top down view, a side view or a stereogram for example. The last module includes the workstation components that allows to customize the acquisition parameters of a specific scan. This solution is suitable for all
